Instant revocation			✓
OLVID BOTS			Option

Enterprise plan allows you to easily deploy and manage Olvid.

Your users authenticate via your SSO, benefit from the full range of free features and the ability to contact each other with a single click, make two-way and multiway audio and video calls, and be automatically included in groups.

Your administrators have access to the Management Console to administer all your company's internal and external users. Users can be managed manually, by CSV import, or driven by your existing directory (LDAP, Active Directory). You can manage user rights, activate instant revocation, and create and administer groups. The application can be deployed either manually or via MDM.

Prices are indicative only. In-app purchases available via the App Store and Google Play.
